

# iCareerDay

The job fair without paper resumes

Process & Service Design - Project Presentation

Simone Staffa & Alejandro Ferrero

# Outline

- Service Goal
- Process Documentation
  - Service Blueprint
  - Choreography
  - BPMN
  - PetriNet
- Process Implementation
  - Swagger REST API
  - Camunda

# Service Goal

**Innovate job fairs** providing a system to use PDF resumes instead of paper ones.

## No more paper waste

- Let students upload their resume to companies just scanning a QR Code.

## Help recruiters managing tons of resumes

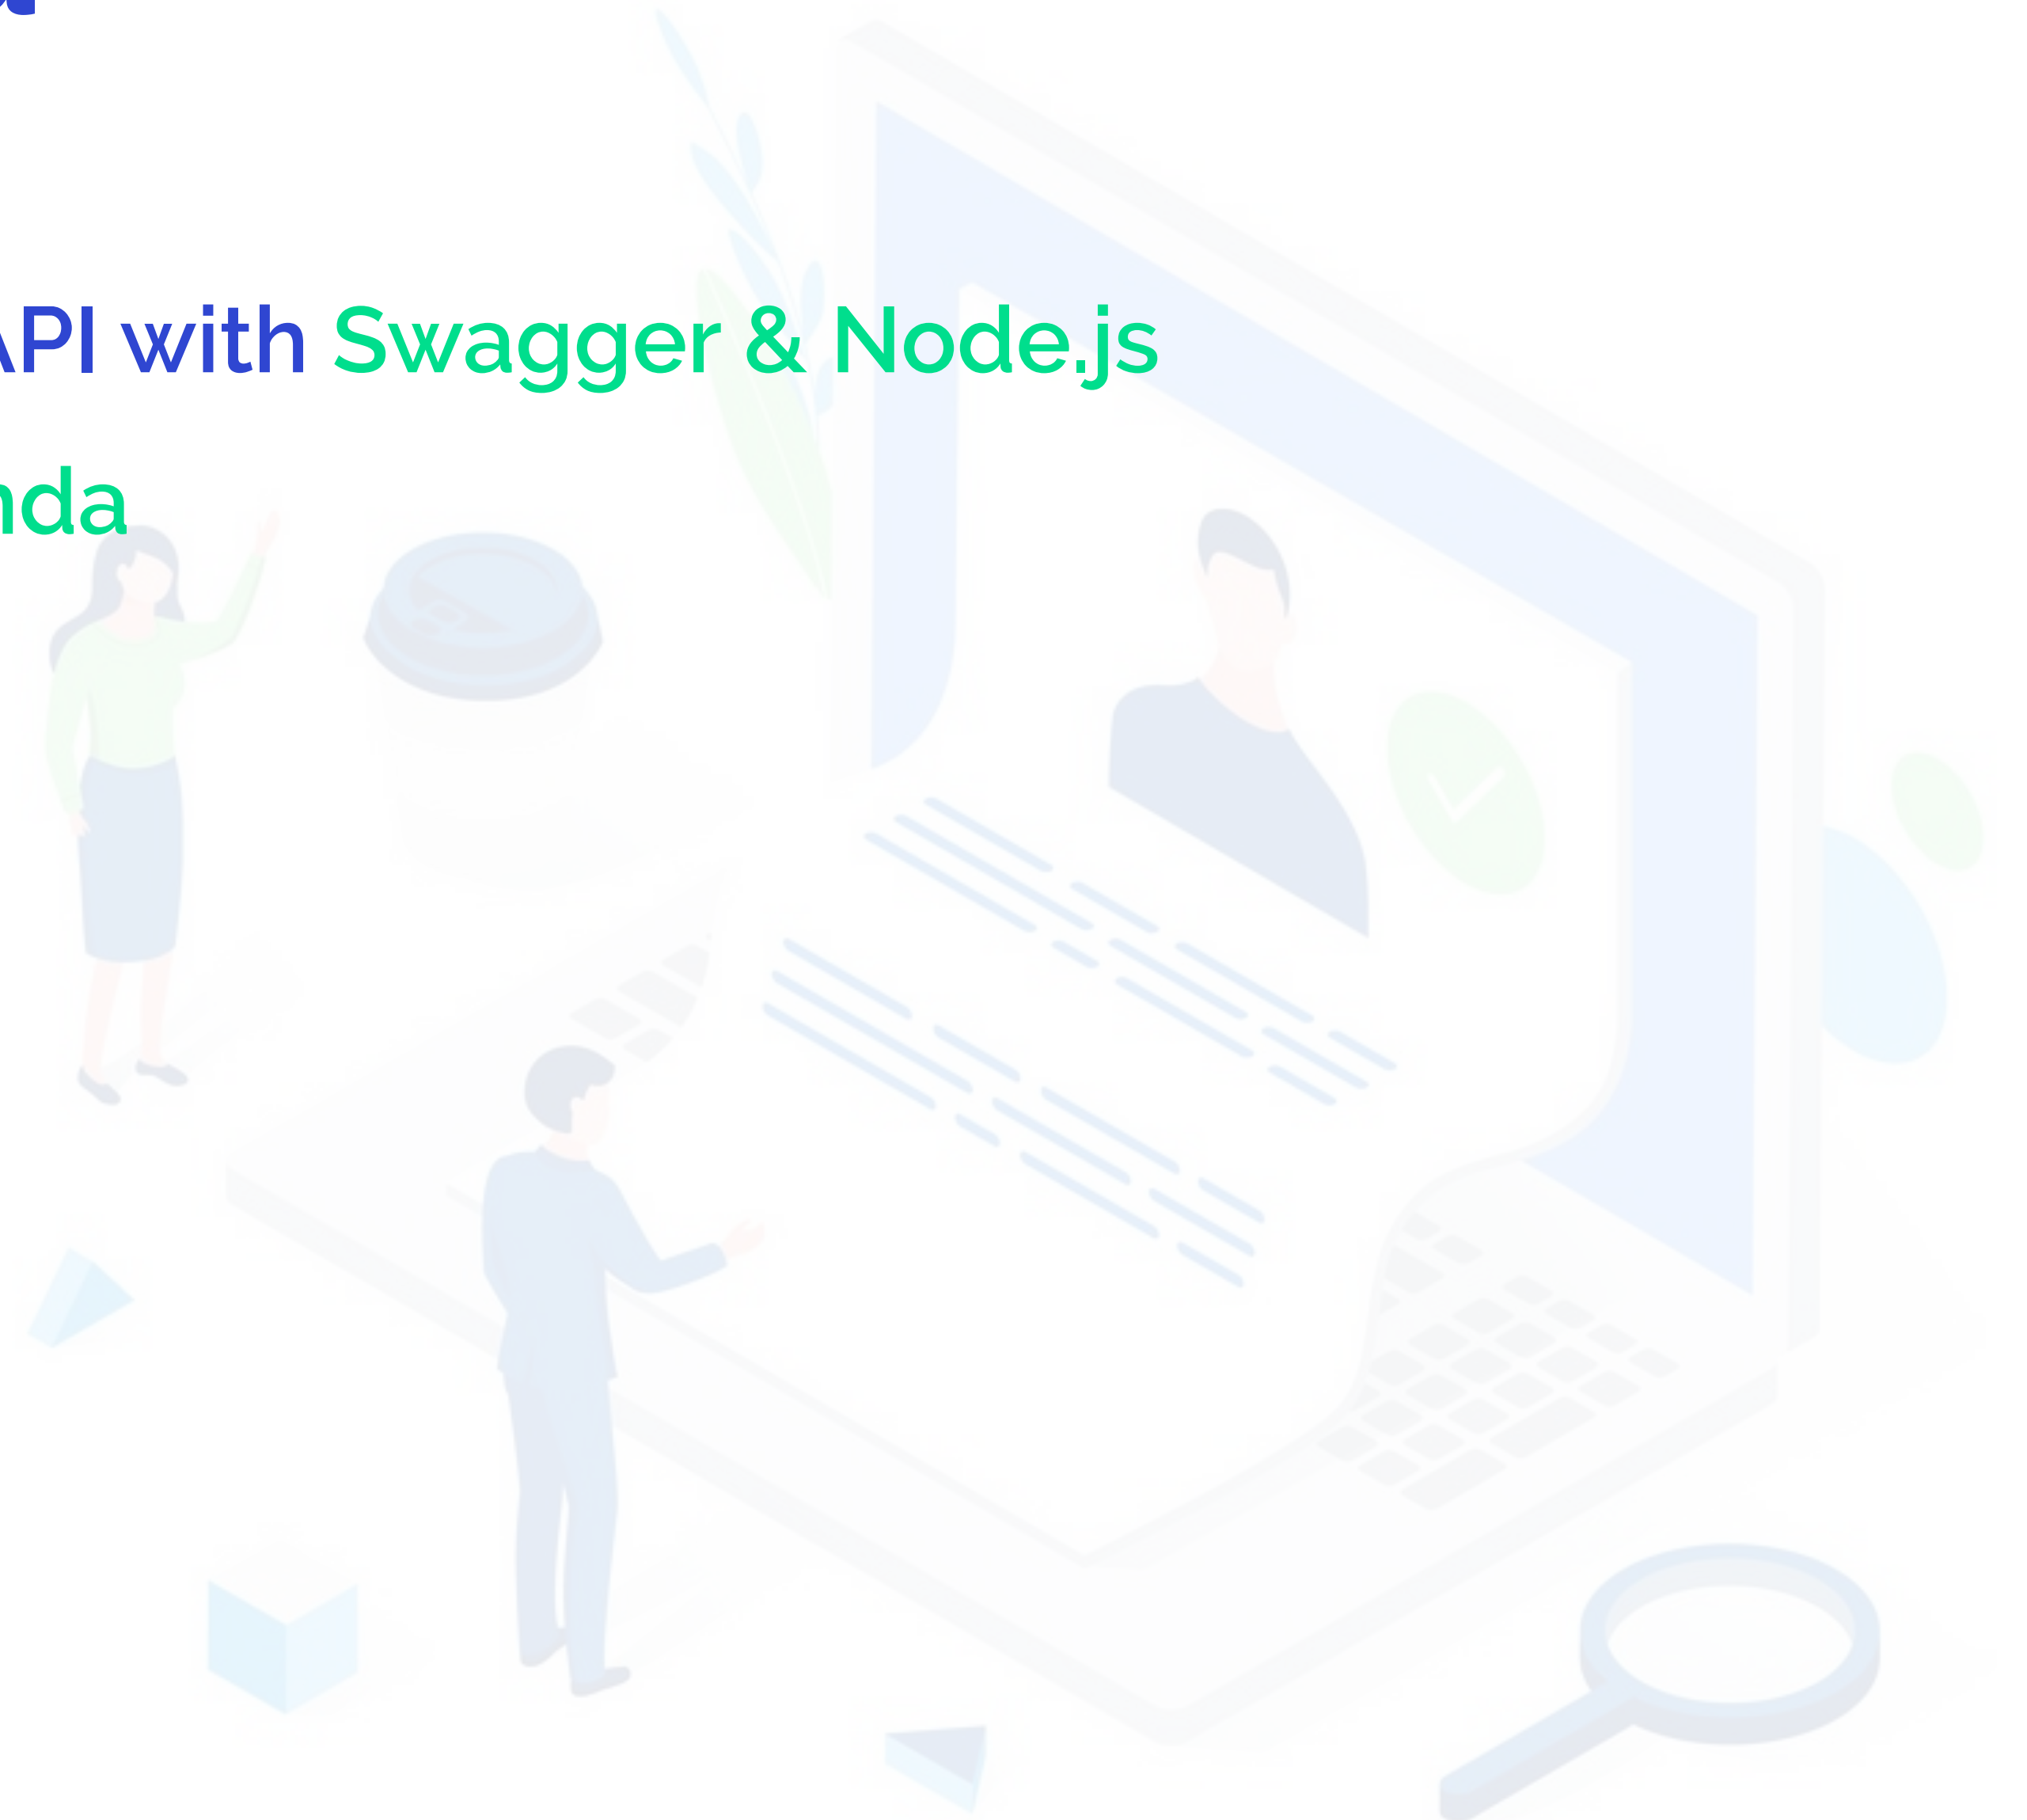

- Recruiters can review all the resumes in a web platform, avoiding the risk of losing them.

# Process Implemented

- Documented & Implemented REST API with **Swagger & Node.js**
- Full process implemented on **Camunda**

# Challenges

- Working full-remote in a group project
- Maintaining coherence between the different diagrams
- Camunda
  - Process (Pools) communication
  - User authorisation set up for task and processes
  - Camunda API complexity (POST external messages)
  - Lack of documentation for Node.js implementation
